America Saves Week 2025. Saving for your past, present, and future

America Saves Week begins on April 7th, 2025! Team up with Central One to learn practical ways to

It's never too late to teach valuable financial skills!

Try creating a mock monthly budget with your child, including real-world expenses like rent, groceries, and entertainment. Give them a set amount of money and let them decide how to allocate it. To make it even more fun, use the Zogo app, which offers interactive lessons on budgeting and money management. As they complete tasks, they can earn pineapples that can be redeemed for gift card rewards! Use the code **Central1** to get started. This hands-on activity will help them grasp budgeting, prioritize expenses, and learn financial concepts in a fun, engaging way.

Start today on a fun financial education adventure with your child!

Make financial literacy exciting by turning it into a fun savings adventure. Create a treasure map where each milestone represents a savings goal. At each milestone, set challenges for your child, such as budgeting for a week or saving a specific amount. As they complete each challenge, they earn rewards that bring them closer to their final treasure. This engaging approach not only makes learning about money enjoyable but also teaches valuable financial skills like budgeting and saving.

Kickstart your child's financial education with a fun scavenger hunt!

Create simple tasks like identifying coins, finding items under \$5, or solving math problems. Hide clues around your home, and as your child completes each task, they'll learn about money management and earn rewards for their Savings Passport. Finish the hunt with a celebration—whether it's a prize or a family outing. This fun activity builds strong financial habits while teaching kids about money!

Q: Why did the piggy bank go to the beach?

A: To save up some sand dollars!
